EDUCATION

CUNY Hunter College

New York, NY

B.A. in Computer Science — GPA: 3.3

Sep. 2024 – May 2026

- Coursework: Data Structures and Algorithms, Databases, Full-Stack Development, Data Science, Robotics
- Capstone: MotionCorrect, a real-time computer-vision web application (May 2026)

CUNY Borough of Manhattan Community College (BMCC)

New York, NY

A.S. in Computer Science

2019 – 2021

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C++, SQL, HTML/CSS

Frontend: React, Vite, REST API integration

Backend: Flask, Node.js, Express, RESTful API design

Data & ML: Pandas, NumPy, scikit-learn, Matplotlib, Seaborn, MediaPipe

Databases & Tools: MySQL, Git, GitHub, Linux/Bash

Concepts: Object-Oriented Design, Relational Schema Design, Computer Vision, Real-Time Systems, Agile/Scrum

PROJECTS

MotionCorrect: Real-Time Exercise Form Detection System | *Python, Flask, MediaPipe, React, Vite, LLM API*

- Architected a full-stack web application that streams browser webcam frames to a Python/Flask REST backend for pose inference, returning real-time form classification to a React/Vite client.
- Built a pose-extraction pipeline using MediaPipe to compute 33 body keypoints per frame and engineered joint-angle features for downstream classification, achieving **85–95% accuracy** across multiple exercise patterns on held-out test data.
- Implemented a rep-counting state machine over joint-angle transitions to detect exercise repetitions independent of user pace or camera angle.
- Integrated an LLM-backed feedback engine that converts detected form errors into personalized correction cues, exposed through a streaming REST endpoint.
- Owned the ML/CV module in a 3-person agile team; ran sprint reviews, managed branching on GitHub, and resolved cross-component integration defects.

FitLog: Full-Stack Fitness Tracking Application | *Java, MySQL, React, HTML/CSS/JS*

2025

- Built a workout-tracking web application end-to-end as the sole engineer, covering relational schema design, Java backend services, and a React frontend with no third-party UI libraries.
- Designed a normalized MySQL schema for users, workouts, and goals, and implemented CRUD endpoints supporting historical progress comparison across user-defined time windows.
- Developed a query and aggregation layer that powers in-app progress charts and exercise history, replacing static views with time-series-backed visualizations.
- Authored end-to-end API contracts and frontend rendering logic, demonstrating full ownership across schema, business logic, REST API, and UI layers.

NYC Educational Inequality Analysis | *Python, Pandas, Matplotlib, Seaborn*

2026

- Built a Python data pipeline that ingests, joins, and cleans 4 NYC Open Data CSV datasets via multi-key Pandas joins, with explicit handling of schema drift and missing values.
- Produced bar charts, heatmaps, and regression plots that surface funding-versus-graduation-rate correlations across boroughs and demographic groups, supporting a 3-person team's final analysis.

ADDITIONAL

Languages: English (Proficient), Chinese / Mandarin (Proficient), Spanish (Conversational)
